Amendments to Specification

Paragraph extending between lines 6 and 13 on page 5:

Projections 16 for coolant inlet and outlet openings 14, 15 may be on opposite sides of the cooler plate as shown in Fig. 2 or, alternatively, they may both be disposed on the same side of the cell stack assembly, as shown in Fig 3. In either case it is preferable for the coolant inlet and outlet openings 14, 15[()] to be adjacent an air manifold (either an air inlet/outlet manifold 6a, 6b or air turn manifold 7, for example) so that any gas leakage into the coolant, assuming the coolant pressure is below the reactant pressures, will be air.
